EXPERIENCE

SOFTWARE ENGINEER — *EROAD Ltd. (Auckland, January 2025 – Present)*

- Designed and delivered Walkie Talkie feature end-to-end, building REST APIs and real-time communication infrastructure to enable driver-dispatcher coordination for 1,000+ fleet vehicles across AU/NZ; owned production release and maintained system stability through on-call rotation.
- Led technical solution design and implementation of safety-critical SoS emergency feature, architecting the workflow from requirements gathering through production deployment; collaborated cross-functionally with product and QA teams to ensure compliance with safety standards for commercial fleet operations.
- Optimized PostgreSQL queries for high-traffic production service, identifying and resolving a critical performance bottleneck that reduced query latency by 66% (from ~1500ms to ~500ms) and eliminated service degradation affecting customer operations.
- Drove CI/CD modernization for customer-facing Inspect mobile app, migrating deployment pipelines from deprecated Visual Studio App Center to GitHub Actions and Firebase; eliminated recurring deployment failures and reduced release cycle time, improving delivery reliability for app releases used by vehicle inspectors to maintain regulatory compliance.
- Architected and deployed CVIU mailing microservice on AWS, integrating 6 cloud services (SES, S3, SNS, SQS, EKS, IAM); Terraform for infrastructure-as-code and GitHub Actions for automated CI/CD.

PROJECTS

BMMA | *React, Next.js, Firebase, Stripe*

[Deployed Application](#)

- Designed, built, and deployed a Badminton Match-Making Application using React and Next.js, featuring player management (CRUD), automated match generation based on court availability, time constraints, and player participation, with data persistence via Firebase.
- Iteratively improved the system through live testing with badminton club stakeholders, reducing manual match setup time from ~10 minutes per round to ~1 minute per round for organizers; integrated Stripe for payment processing and supported real-world club operations.

Starry Night | *Next.js, AWS, Java, Springboot, Github Actions, Terraform*

[Deployed Application](#)

- Built and deployed a full-stack Content Management System using Next.js and Spring Boot, enabling admin CRUD operations for projects and events; implemented secure file uploads via Amazon S3 presigned URLs and integrated a PostgreSQL database hosted on AWS EC2.
- Designed and automated CI/CD pipelines with GitHub Actions to build and deploy Spring Boot artifacts to EC2, while provisioning AWS infrastructure using Terraform for scalable, reproducible deployments.

MixnMatch | *React, Vite, Ollama, Python, Flask, SQLite*

[Github Repository](#)

- Developed a team-based AI bot management app for the existing MixnMatch dating app, for current psychology research. Led backend features including AI-driven chat using local LLMs, in house learning algorithms, image generation via Stable Diffusion, while collaborating with a full-stack team.

TECHNICAL SKILLS

- Python, Java, TypeScript; Spring/Spring Boot, JUnit, Mockito; React, Next.js, TailwindCSS, Flutter; AWS (EC2, S3, SES, SNS, SQS, Kinesis, DynamoDB, IAM, ECR, EKS), Terraform, Docker, Kubernetes; PostgreSQL, MongoDB; Git, GitHub, GitHub Actions, Concourse; Datadog, Grafana, SumoLogic; IntelliJ, VS Code, Maven, DBeaver

EDUCATION

Bachelor of Science in Computer Science, University of Auckland – 2024
